Teja Revanth
Senior .NET Full Stack Developer
revanth.techy1@gmail.com
205-289-0087
www.linkedin.com/in/teja-a-5c282314a

Professional Summary

- Experienced **.NET Full Stack Developer** with **12+ years** of experience delivering scalable web and enterprise applications. Strong background in end-to-end development, performance optimization and agile collaboration across front-end, back-end and cloud environments.
- Proficient in developing scalable and maintainable backend solutions using **C#** across various enterprise-grade applications, with strong command over core concepts such as Polymorphism, Encapsulation, Generics, Collections, Lambda Expressions, LINQ, Delegates, Events and Async Programming (Async/Await).
- Extensive experience building robust APIs and web applications using **ASP.NET Core 6.0/3.0 Web API**, **ASP.NET Core MVC** and classic **ASP.NET**.
- Deep understanding of the **.NET Framework** and **.NET Core platforms**, with a focus on backend services and enterprise-level application development.
- Strong knowledge of **Microservices**, **Onion Architecture**, **Service-Oriented Architecture** (SOA) and **Client-Server Architecture** for modular and scalable solutions. I am skilled in applying **Factory**, **Thread Pool**, **Strategy** and **Singleton** design patterns to create flexible, reusable and efficient code.
- Hands-on experience with **Entity Framework**, **Entity Framework Core** and **ADO.NET** for efficient and secure data access.
- Proven ability in building and consuming **RESTful APIs (JSON)** and **SOAP APIs (XML)**, ensuring secure and performant integrations and experienced in API testing using tools like **Postman** and **Swagger**.
- Proficient in API management using **Azure API Management**, **AWS API Gateway** and **Apigee** for secure and scalable API exposure.
- Experienced in implementing authentication and authorization mechanisms using **OpenID Connect**, **OAuth2** and **JWT** tokens.
- Expertise in **Angular** and **React** for building SPAs, with strong knowledge of component architecture, state management (**RxJS**, **NgRx** and **Redux**) and lifecycle hooks. Proficient in **jQuery** for DOM manipulation, event handling and **AJAX** in legacy codebases.
- Strong grasp of **JavaScript**, **TypeScript**, **HTML**, **CSS**, **Bootstrap** and **AJAX** to build dynamic and responsive user interfaces.
- Skilled in **Angular Testing Library**, **Jasmine**, **Karma** and **Jest** for front-end testing; **XUnit**, **NUnit**, **MSTest**, **Moq** and **Cucumber** for back-end and BDD testing.
- Experienced with **MS SQL Server**, **PostgreSQL**, **MongoDB** and **Azure Cosmos DB** for relational and NoSQL data solutions.
- Knowledgeable in asynchronous messaging with **MSMQ**, **RabbitMQ**, **Apache Kafka** and **Azure Service Bus**.
- Proficient in deploying applications on **AWS** and **Azure**, with experience in compute, storage and networking services.
- Used **Claude Code**, **Cursor**, and **GitHub Copilot** to streamline production-support activities by accelerating log analysis, defect investigation, code navigation, refactoring, unit-test generation, deployment-script updates, and engineer-reviewed troubleshooting workflows.
- Leveraged **AI-assisted development tools** to retrieve relevant code faster across large enterprise codebases, identify impacted services, summarize legacy logic, generate deployment checklists, validate configuration changes, and support smoother CI/CD releases with manual review and approval.
- Familiar with static code analysis and enforcement tools such as **SonarQube**, **ReSharper** and **StyleCop**. Versatile in source control systems including **GitHub**, **Bitbucket**, **GitLab** and **SVN**.
- Skilled in using **Visual Studio**, **Visual Studio Code**, **MSBuild** and **TeamCity** for build automation and development productivity.
- Experienced in deploying applications using **IIS**, **Azure App Services** and containerized solutions with **Docker** and Azure Kubernetes Service (**AKS**).
- Experienced in Agile methodologies with tools like **Jira**, **GitLab Issues**, **Trello** and **ServiceNow** for task and issue tracking.
- Proficient in monitoring application performance and health using **Splunk**, **AppDynamics**, **Azure Application Insights** and **New Relic**.

- Skilled in managing containerized applications with **Docker** and **Kubernetes** for scalable and resilient deployments.
- Experienced in building CI/CD pipelines using **Azure DevOps**, **GitLab CI/CD** and **Jenkins** with custom runners.
- Strong scripting abilities with **PowerShell** and **Shell** for automating deployments and routine tasks across **Windows** and **Linux** environments.
- Created and maintained technical documentation using **Confluence**, **GitLab Wiki**, **Bitbucket Wiki** and **SharePoint** for effective knowledge sharing.

Professional Experience

Client: PGIM | Newark, NJ **May 2025 - Till Date**
Senior .NET Full Stack Developer

Roles & Responsibilities:

- Led **Agile** development teams through all phases of the **SDLC** within the CLM and KYC modules of a financial application, incorporating iterative planning, daily stand-ups, sprint reviews and retrospectives to ensure timely delivery of regulatory-compliant features and enhancements.
- Designed and implemented scalable **Microservices architecture** to modularize CLM and KYC functionalities such as onboarding, risk scoring and periodic reviews, utilizing the **Factory Design Pattern** to standardize object creation and promote code reusability across services.
- Developed and optimized financial applications using modern **.NET 8/9/10** (**C# 11**) to improve performance and maintainability within the KYC workflow, leveraging features such as required members, list patterns and generic math for efficient data validation, risk calculations and rule-based processing.
- Engineered high-performance, secure and scalable **RESTful APIs** using **ASP.NET Core 6.0 Web API** to support key **CLM/KYC** operations such as customer onboarding, document verification and status tracking, implementing best practices for authentication, caching, logging and exception handling.
- Implemented **Entity Framework** and **Entity Framework Core** ORM for regulatory data in KYC workflows, supporting code-first and DB-first approaches for reliable, auditable access.
- Designed and integrated **JSON**-based **REST APIs** to enable seamless front-end/back-end communication, using **Postman** extensively for testing, debugging and validating endpoints throughout the API lifecycle.
- Configured and deployed APIs via **Azure API Gateway**, enhancing security, scalability and traffic management.
- Secured APIs using **OAuth2** and **JWT** standards for user authentication and authorization in distributed systems.
- Developed rich, responsive user interfaces in **Angular 18+** applications using **HTML5**, **CSS3**, **SCSS**, **Bootstrap** and **TypeScript**, ensuring cross-browser compatibility and a seamless user experience.
- Built scalable **Angular** applications using reactive forms, **RxJS** and lazy loading, with **NgRx** for state management to ensure performance and maintainability in .NET-integrated solutions.
- Developed and optimized complex **SQL/T-SQL** queries, stored procedures and triggers in **Microsoft SQL Server** to support efficient data operations, improve performance and ensure data integrity within .NET applications.
- Worked with enterprise data teams to validate and consume **Snowflake-based datasets** for compliance reporting, reconciliation, operational analytics, and downstream application workflows through secure cloud integrations and SQL-based data validation.
- Developed and maintained Azure Data Factory pipelines to ingest, transform and orchestrate compliance and KYC data from enterprise sources into cloud-based reporting and reconciliation workflows, using parameterized datasets, linked services, triggers and monitored pipeline executions.
- Integrated Azure Data Lake Storage with Azure Data Factory to securely store structured and unstructured compliance data, organizing data across ingestion, validated and curated layers for downstream analytics, audit reporting and application processing.
- Implemented NoSQL solutions using **Azure Cosmos DB**, optimizing data distribution and consistency models for cloud-native applications.
- Integrated **Azure Service Bus** for asynchronous messaging between services, improving application resilience and scalability.
- Maintained code quality using **SonarQube**, enforcing coding standards and reducing technical debt through continuous static code analysis.
- Wrote comprehensive unit and integration tests using **Xunit**, achieving high test coverage and robust error handling.
- Tested Angular applications using **Angular Testing Library** and **Jasmine** and automated web services testing using **Cucumber** for behavior-driven development (BDD).

- Implemented and maintained CI/CD pipelines using **Azure DevOps** with **YAML** configuration to automate build test and deployment processes for .NET applications, ensuring faster and more reliable software delivery.
- Containerized applications using **Docker** and orchestrated deployments via **Kubernetes** to support microservices and cloud-native architecture.
- Designed and implemented scalable cloud-native applications using **Azure** services such as **Azure Functions**, ensuring high availability, performance and cost-efficiency.
- Integrated **Azure Blob Storage** with .NET applications to manage unstructured data, enabling secure, scalable and efficient file storage and retrieval for enterprise-grade solutions.
- Used **Visual Studio Code** as a primary development environment for front-end, back-end and scripting tasks.
- Deployed applications via **Azure App Service**, managing environments, scaling and performance monitoring.
- Tracked and managed project issues using **GitLab Issues**, facilitating agile project management and team collaboration.
- Monitored application performance using **Splunk** and automated development workflows using **PowerShell** scripting.
- Used **Claude Code**, **Cursor**, and **GitHub Copilot** to smoothen production-support activities by quickly analyzing application logs, tracing API failures, identifying impacted .NET services, generating troubleshooting notes, and accelerating defect resolution during compliance workflow support.
- Leveraged **AI-assisted coding tools** to retrieve code faster across **.NET Core microservices**, Angular modules, SQL scripts, and CI/CD configuration files, helping update deployment scripts, validate release changes, and support easier deployments through engineer-reviewed automation.
- Maintained version control using **GitLab** and documented technical processes and designs via **GitLab Wiki** to ensure knowledge sharing and continuity.

Client: PNC bank | Strongsville, Ohio **May 2020 - Apr 2025**
Senior .NET Full Stack Developer

Roles & Responsibilities:

- Applied **Agile** methodologies and actively participated in all phases of the **Software Development Life Cycle** (SDLC), including sprint planning, backlog grooming, daily stand-ups and retrospectives to ensure timely delivery.
- Developed scalable **C#** backend services to support high-volume banking operations such as transactions, account management and authentication, ensuring reliability and compliance.
- Developed and secured **RESTful APIs** using **ASP.NET Core 3.0 Web API** to facilitate seamless integration between internal banking applications and external financial platforms, maintaining strict adherence to data privacy and security protocols.
- Designed and deployed **Microservices architecture** for modular banking features such as onboarding and loan servicing, leveraging **Thread Pool pattern** for efficient async processing.
- Utilized **Entity Framework Core** to access complex financial data with optimized **LINQ** queries. Implemented code-first and database-first approaches to support legacy and modern banking systems.
- Designed and consumed **REST APIs** with **JSON** data formats, integrated **Azure API Management** as a gateway and automated API testing using **REST Assured**.
- Integrated modern authentication protocols such as **OAuth2** and **OpenID Connect**, enabling secure user access and single sign-on across distributed services.
- Developed dynamic, responsive front ends using **Angular 10**, **TypeScript**, **HTML5**, **CSS3** and **Bootstrap**, adhering to modular architecture and best UI/UX practices.
- Implemented NoSQL data storage using **MongoDB**, including schema design, indexing strategies and aggregation pipelines for performance optimization.
- Consumed and validated **Snowflake-hosted banking datasets** for reconciliation, reporting, operational analysis, and downstream application processing through secure cloud connectivity and SQL-based validation routines.
- Built Azure Data Factory pipelines to extract, transform and load banking data from relational and cloud sources for reconciliation, operational reporting and downstream application processing, implementing scheduled triggers, parameterization and failure monitoring.
- Used Azure Data Lake Storage as a scalable repository for raw, processed and curated banking datasets, applying secure access controls and structured folder organization to support data validation, analytics and historical retention.
- Integrated **Apache Kafka** for distributed messaging, ensuring high-throughput, real-time communication between microservices.

- Deployed, managed and monitored applications on **Azure**, leveraging services such as **App Services**, **Azure API Management** and **Azure DevOps**.
- Maintained code quality using **ReSharper**, performing continuous code analysis, refactoring and enforcing team-wide coding standards.
- Used **Visual Studio** as the primary development environment, optimizing builds and debugging workflows for efficient delivery.
- Deployed containerized applications using **Docker**, orchestrated using **Azure Kubernetes Service (AKS)** and optimized for high availability and scalability.
- Tracked development tasks, sprints and bugs using **Jira**, ensuring alignment with project timelines and product requirements.
- Implemented application performance monitoring using **AppDynamics**, identifying performance bottlenecks and improving system health.
- Used **Claude Code**, **Cursor**, and **GitHub Copilot** to automate repetitive production-support tasks such as log review, code-impact analysis, SQL troubleshooting, test-case generation, documentation updates, and root-cause investigation for banking application issues.
- Leveraged **AI-assisted development tools** to retrieve and understand code faster across **ASP.NET Core APIs**, Angular modules, Kafka integrations, database scripts, and deployment pipelines, improving release preparation, deployment validation, and post-deployment support efficiency.
- Automated CI/CD pipelines using **GitLab CI/CD** with dedicated **Runner**, ensuring reliable build, test and deployment processes across environments.
- Orchestrated **Docker** containers using **Kubernetes**, focusing on service discovery, load balancing and horizontal scaling.
- Wrote **Shell Scripts** to automate routine development tasks, improving efficiency in deployment, logging and environment setup.
- Performed unit testing with **Moq** and **NUnit** for backend components and conducted frontend testing using **Jasmine** and **Karma** to ensure application stability and reliability.
- Managed version control using **Bitbucket**, documented technical specifications and architecture in **Bitbucket Wiki** for team collaboration and onboarding.

Client: AIG | Tampa, FL **Dec 2018 - April 2020**
.NET Developer

Roles & Responsibilities:

- Led the end-to-end **Software Development Lifecycle** (SDLC), from requirements gathering and system design to implementation, testing and deployment, utilizing **Agile** methodologies such as Scrum.
- Developed scalable and maintainable web applications using **ASP.NET Core MVC** and **C#**, ensuring adherence to clean coding principles and **SOLID** design patterns.
- Architected solutions following the **Onion Architecture**, ensuring loose coupling between layers and improved testability and maintainability.
- Implemented the **Strategy** design pattern to handle dynamic business logic scenarios and facilitate flexible component integration.
- Built and consumed **RESTful APIs** using **JSON** over **ASP.NET Core**, integrating with **Azure API Management** for secure and scalable endpoint exposure.
- Secured APIs using **JWT** (JSON Web Tokens), implementing token-based authentication and role-based authorization mechanisms.
- Worked with relational databases such as **PostgreSQL**, designing schemas, writing optimized SQL queries and leveraging **Entity Framework Core** for ORM and **LINQ**-based data access.
- Integrated asynchronous messaging solutions using **RabbitMQ**, facilitating reliable communication between microservices and background processing tasks.
- Designed responsive and user-friendly UIs using **HTML**, **CSS**, **JavaScript**, **Bootstrap** and **React**, ensuring seamless user experience across devices.
- Wrote unit tests using **MSTest** for backend components and **Jest** for frontend testing to ensure code quality, reliability and regression coverage.
- Designed and deployed cloud-native applications using **Azure services** such as **Azure Virtual Machines** (VMs), **Azure Blob Storage**, and **Azure SQL Database**, ensuring high availability, scalability, and cost optimization within the .NET ecosystem.

- Implemented CI/CD pipelines using **Jenkins** and **MSBuild**, automating build, test and deployment processes to various environments.
- Deployed applications on **IIS** (Internet Information Services), configuring web servers and managing application pools and deployments.
- Monitored application performance and errors using **Azure Application Insights**, proactively identifying and resolving issues to maintain high availability.
- Tracked development progress and managed tasks using **Trello**, ensuring alignment with sprint goals and **Agile** ceremonies.
- Utilized **GitHub** for version control, following **GitFlow** branching strategy and conducting code reviews through pull requests.
- Optimized codebase using **ReSharper**, enforcing code standards, identifying code smells and performing automated refactorinFrag.
- Documented architecture, workflows and best practices in **Confluence**, promoting knowledge sharing and onboarding support.

Client: Maryland Department of Health | Baltimore, Maryland **Aug 2015 - Nov 2018**
.NET Developer

Roles & Responsibilities:

- Participated in all phases of the software development life cycle using **SDLC** and **Agile**, contributing to sprint planning, daily stand-ups and retrospectives.
- Developed scalable web applications using **ASP.NET** and **C#**, implementing **SOA** and the **Singleton Design Pattern** to enhance code reusability and maintainability.
- Utilized **ADO.NET** to build robust data access layers for handling large-scale CRUD operations in **MS SQL Server**.
- Engineered secure and efficient APIs using **SOAP**, integrated external services with **XML**, **JWT** and **Apigee** for authentication and gateway management.
- Designed and consumed **REST** and **SOAP** APIs to facilitate seamless communication between internal services and third-party integrations.
- Managed asynchronous processing and service decoupling using **MSMQ**, improving throughput in distributed architecture.
- Implemented caching and optimization strategies in applications developed with **.NET**, improving load times and reducing server load.
- Designed responsive user interfaces using **Angular**, **TypeScript**, **HTML**, **CSS** and **Bootstrap**, improving user experience across devices.
- Migrated legacy systems to cloud infrastructure using **AWS**, enhancing availability and scalability with services Such as **AWS S3** and **AWS RDS**.
- Automated builds using **MSBuild**, integrated with **Bamboo** for CI/CD to accelerate deployment and maintain stability.
- Built and executed unit tests using **NUnit**, improving code reliability and stability by detecting defects early in the development cycle and reducing production issues.
- Monitored performance using **New Relic**, identifying bottlenecks and reducing average response time by 25%.
- Managed version control using **Subversion (SVN)** and tracked development issues with **ServiceNow**, ensuring effective branching strategies, streamlined workflows and seamless team collaboration across the software lifecycle.
- Conducted code reviews and pair programming sessions to improve code quality and reduce technical debt.
- Created and maintained technical documentation using **SharePoint**, facilitating smoother handovers and compliance audits.

Client: Cisco |San Jose, CA **March 2014 - July 2015**
.NET Developer

Roles & Responsibilities:

- Participated in **Agile** development practices, including sprint planning, daily stand-ups and retrospectives, to ensure timely delivery and continuous improvement.
- Engineered client-server applications with a strong focus on **client architecture**, ensuring high performance, security and maintainability.

- Developed and maintained scalable applications using **C#** and the **.NET Framework** to meet complex business requirements.
- Designed and implemented data access layers using **ADO.NET**, optimizing database interactions with **MS SQL Server** for performance and reliability.
- Built and consumed **SOAP APIs**, effectively handling **XML** payloads for communication with external systems and third-party services.
- Created responsive and interactive front-end components using **HTML**, **CSS**, **Bootstrap** and **Ajax** to enhance user experience.
- Utilized **jQuery** and **AngularJS** for DOM manipulation, event handling, asynchronous **AJAX** calls and integrated third-party plugins to enrich web functionality and enhance user interactivity.
- Integrated **Apache Kafka** as a message queue system to support asynchronous processing and improve system decoupling and scalability.
- Maintained version control and managed code repositories using **SVN** (Subversion), promoting collaboration and traceability among development teams.
- Configured and managed builds using **TeamCity**, automating the deployment pipeline and minimizing manual intervention.
- Implemented CI/CD pipelines with **Jenkins**, ensuring seamless code integration, testing and delivery across environments.
- Performed unit testing using **NUnit**, developing and maintaining test cases to ensure code quality and reduce regression issues.
- Worked closely with QA and DevOps teams, supporting testing and deployment activities to meet project deadlines and system stability.

Certifications

- AWS Certified Solutions Architect Associate.
- Microsoft Certified: Azure Solutions Architect Expert.

Education

- Bachelor’s in computer science from Osmania University in May 2012.
- Master’s in computer science from Campbells University in December 2013.
